

CAREER PROFILE

- AI/ML engineer and Master of Applied AI student at Deakin University, building production-grade systems across MLOps, full-stack SaaS, and robotics.
- Founded and solo-shipped Clause Check AU — a live AI SaaS product that analyses Australian construction contracts using Claude Opus 4.6, deployed on Cloudflare Workers with a Python REST backend, Supabase, Stripe, and a full CI/CD pipeline via GitHub Actions.
- Delivered an Azure ML SDK v2 predictive maintenance pipeline with custom feature engineering and deployment to a managed online endpoint for real-time inference.
- Built DermaGuard AI, a PyTorch EfficientNet-B4-based skin risk assessment platform enabling accessible, early-stage medical screening via the web.

TECHNICAL SKILLS

- **Languages:** Python (Advanced), SQL, Java, R, JavaScript
- **AI/ML:** PyTorch, OpenCV, LangChain, YOLO, Hugging Face, scikit-learn, NLTK
- **DevOps /Database** Docker, Microsoft Azure, MySQL, MongoDB
- **Development:** FastAPI, React, Vite, Streamlit, ROS 2, Git, Agile/SCRUM
- **Data & Cloud:** Tableau, Render, Vercel, Netlify, REST APIs, Obsidian

PROFESSIONAL EXPERIENCE

AI Developer (Capstone) | InnovAlte, Australia | Oct 2025 – Present [\[GitHub\]](#)

- Tuned a YOLO + OCR pipeline for whiteboard detection by analyzing low-recall failure cases, adjusting confidence thresholds, and planning dataset expansion.
- Prototyped audio feedback module to make detections accessible for end users, enabling integration testing beyond the research phase.
- Hardened a React Native navigation app with safe-exit confirmation, consistent back/forward flows, and TypeScript/runtime bug fixes informed by OSRM routing research.

Software Engineer | Deakin Competitive Robotics | Aug 2025 – Present [\[GitHub\]](#)

- Represented Deakin University at the **2026 Australian Rover Challenge** (17 teams, 390+ students across 5 countries), placing 12th while applying teamwork, field problem-solving, and high-pressure debugging skills.
- Completed the rover control GUI by integrating ROS bridge for teleoperation and contributing to autonomous rover and arm navigation using ROS 2 and MoveIt path planning.

EDUCATION

Master of Applied Artificial Intelligence (Professional) | Deakin University, Melbourne | 2024 – 2026

Bachelor of Science in Information Technology | Pillai College, Mumbai | 2020 – 2023 | 8.38 CGPA

PROJECTS

ClauseCheck AU – AI SaaS | Founder & Solo Developer [\[Live\]](#) • [\[GitHub\]](#) *TanStack Start, TypeScript, Python FastAPI, Claude Opus 4.6 + Haiku, Supabase, Stripe, Cloudflare Workers, GitHub Actions | May 2026 - present*

- **Sole founder** of a live AI SaaS that analyses Australian construction contracts (AS4000, GC21, ABIC) and flags risky clauses in plain English in under 2 minutes; async FastAPI + Supabase Realtime pipeline eliminates cold-start timeouts; client-side PDF validation saves API credits.
- Shipped full stack end-to-end: SSR frontend on Cloudflare Workers, FastAPI on Render, Supabase PostgreSQL with RLS + Deno Edge Functions for Stripe AUD checkout, Google OAuth, and quota logic across 4 pricing tiers.
- CI/CD via GitHub Actions: auto-deploys on every push + 12 AI eval pytest tests (all green); state-specific SoP Act rules for all 8 AU states; real AS4000 validation produced 21-finding report. Roadmap: negotiation email generator, paid launch \$19/report.

Fit Track – Voice-First Fitness & Calorie Tracker *Alexa, AWS Lambda (Python), REST API, React | 2026 – Present*

- Designed an end-to-end system where Alexa logs workouts/meals via Lambda into a Render-hosted backend, with a web dashboard for daily calories and history [\[Frontend\]](#) • [\[Backend\]](#).
- Actively maintained open-source project with ~80 clones and ~40 unique cloners over 14 days, continuously improving data accuracy (time zone, source mapping) and UX.

StudyMate AI – Agentic Socratic Tutor *FastAPI, Streamlit, GPT-4o-mini, LangChain | Feb 2026 [\[GitHub\]](#)*

- Innovated repo-aware AI tutor with 3-level adaptive teaching serving 5+ users; deployed Python REST backend on Render with auto-scaling.
- Submitted to Sophie AI Agents Hackathon —among 200+ Australian developers for \$5K prize competition.

Mine Safety RAG Copilot *FastAPI, React, Python, RAG, YOLO | Jan 2026 [\[GitHub\]](#)*

- Replaced keyword search with NLP Q&A system citing 10+ manuals; reduced query time by 75% with 1,000+ chunk RAG pipeline.
- Integrating YOLO PPE detection for real-time safety monitoring across 3 camera feeds.

CERTIFICATIONS

Python Programming | Techgen Institute | Sep – Dec 2023 | 60-hour intensive covering OOP, data structures; built 5 projects

After Effects | Frameboxx Vashi | Mar – May 2024 | 40-hour course in motion design and compositing
